+ Online Billing Solutions

Online bill payment provides your customers with the ability to get immediate credit for bills paid via the Internet using either a debit or credit card or an electronic check. By offering a range of online bill payment configurations, from a simple on-time payment option to a complete biller-branded EBPP site, Online Billing can help you meet your electronic payment goals securely and with a minimum of integration. Just add a link to your current website and provide summary billing data or your current print and mail file and your customers will be able to make payments quickly, knowing they will arrive on time.

What it Does

Consumers today are open to the greener option of receiving their bills electronically. Online Billing can help you take advantage of this opportunity to reduce your mailing costs while you give your customers the ability to view and pay their bills online. By using the same data file generated for mailing, you can match the look of your online bills to your printed bills with 99.9% accuracy. Choose whether to give your customers online bills in addition to their regular bills or to suppress printing for bills presented online and realize additional savings.

> " online billing options allowed us to maintain a 24/7 payment presence without costly call center staff - our on-time payments have increased by 20%. "
> - Steve F., Billing Manager

- **24/7 Payment Portal** - Easy-to-use and available 24/7, Online Billing gives customers the ability to resolve balances through a preferred channel and at their leisure.

- **Extend your Business** - Fully branded for your business, we handle all of the setup so you can focus on your operations

- **Easy-to-use** - Recurring transactions can also be enabled through Online Billing Solutions to maximize efficiency and offer online payment acceptance.

Secure Payment Technology

PaidSuite simplifies data security and repeat transactions by storing customer profiles that include sensitive cardholder data on our secure servers. The profiles can then be referenced in future transactions, eliminating steps in the transaction process for repeat customers and recurring payments.

- **Store Data Securely** - Simplify your PCI Compliance (PCI DSS) when you utilize a tested and validated secure payment data platform. Our servers are proven PCI DSS and reside on the VISA/Mastercard CISP list of secure vendors.

- **Simplify Repeat Orders** - Store payment and customer information so that repeat or future transactions do not require re-entry.

- **Web-Based Interface** - Through the use of cloud based technology you can access the Virtual Terminal from anywhere you have in internet connection through a secure login. You can view customers, manage payments, pull reports and modify payment schedules.
